# Spotiz

Spotization

Invest on sharing economy, the spirit of collaboration and ecology.

Our Vision

Resources are not inexhaustible; many stranded assets can be made available to the community. This promotes ecology and local solutions.

We value People2People exchanges, facilitating the sharing economy and inducing gains in terms of carbon footprint.

A new model to strengthen the community.

We want to create the conditions for the development of the sharing economy, community spirit and collaboration on impact projects.

Understand and implement tomorrow's solutions today!
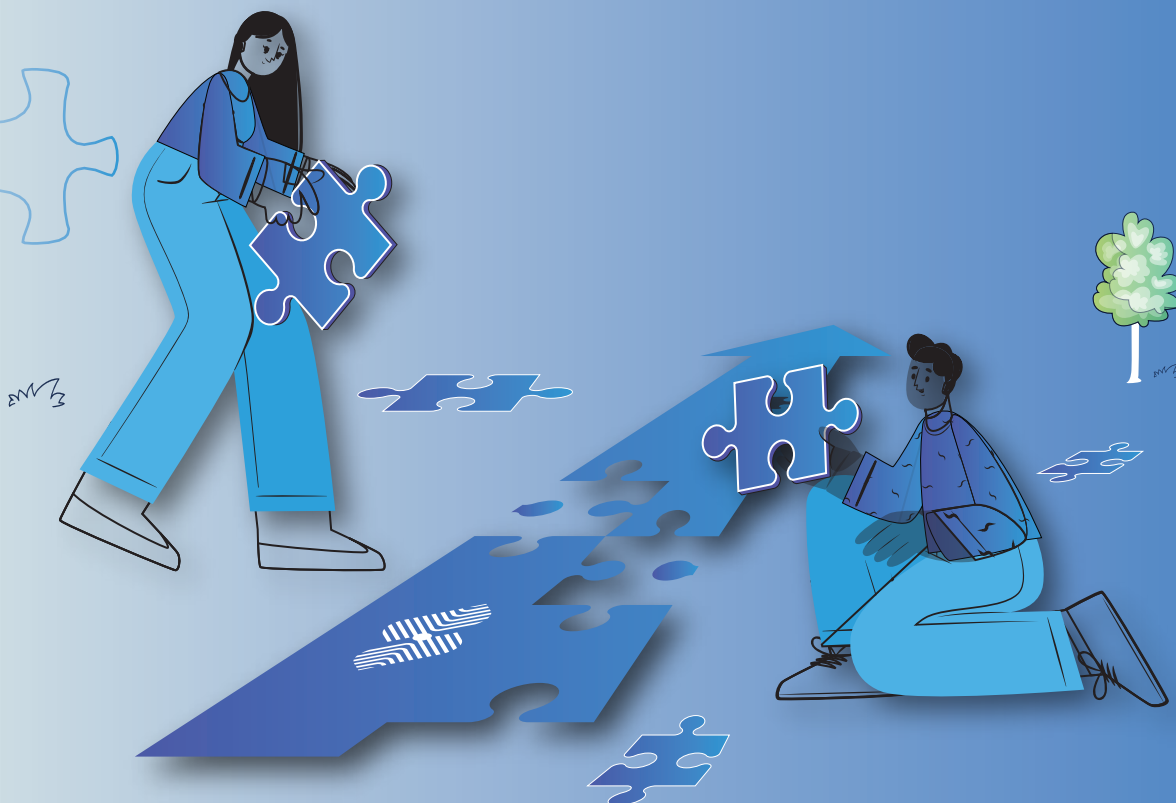

From Spotiz to Spotization

From People2People Green Mobility **App**

Spotiz created in 2020 a collaborative P2P mobile application (People2People) on last mile mobility. It provides real-time access to parking spaces and/or vehicle charging.

The positive effects are threefold: Develop local collaboration, the sharing economy and fight against pollution in the city (20 mins is the average time to find a parking space, it releases 1'400g of CO2).

To cooperative and Impact models

Over the past year, our day-to-day experience with collaborative models, the sharing economy and impact has forged our expertise. Organizations have also asked us to model these principles in other sectors.

We have therefore looked at the innovative models that Blockchain projects bring, completely adapted to our values and our challenges:
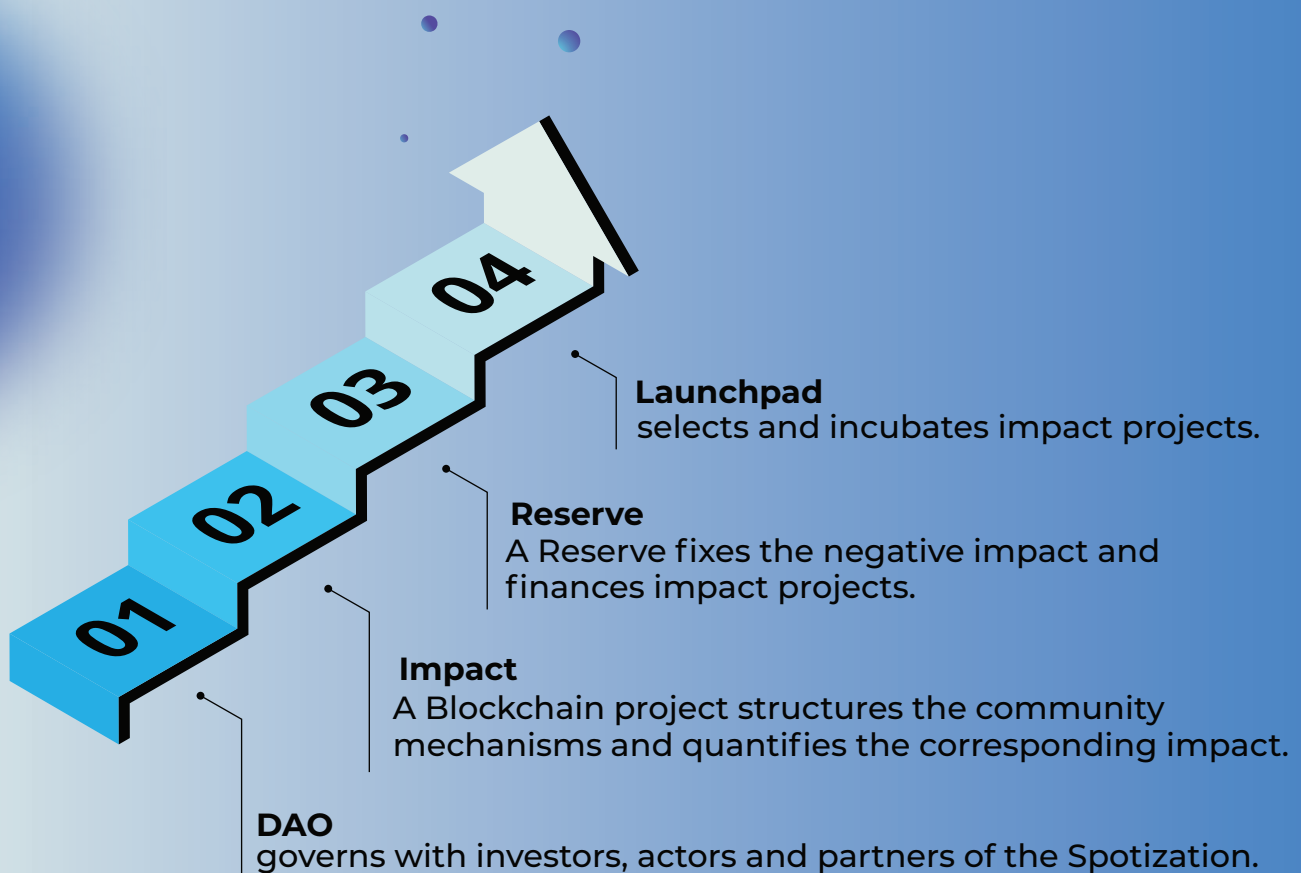

- From the collaborative economy to the sharing economy,
- From collaborative spirit to community management,
- And from ecology to impact.

Spotization is about eco-responsible people becoming members of a participative economy, by investing and/or participating in impact projects.

What is Spotization?

We have learned a lot about collaborative models, the sharing economy and impact. We are able to offer our Spotization models. Organizations are already asking us to support impact projects in this way.

We want to structure the sharing economy and the community spirit on projects with an ecological, social, patrimonial and memorial impact.

01 02 03 04

Launchpad
selects and incubates impact projects.

Reserve
A Reserve fixes the negative impact and finances impact projects.

Impact
A Blockchain project structures the community mechanisms and quantifies the corresponding impact.

DAO
governs with investors, actors and partners of the Spotization.

We are setting up a new business model based on an evergreen fund on the Blockchain.

Why doing Spotization?

Mutualize projects and resources
Projects are stronger when they are united in terms of collaboration, funding and impact

Empower the community
The community will have governance and management rights over the projects.

Structure the community spirit
Create or structure links between people with common projects and ambitions

Measure impact to value projects
Quantifying and valuing the impact of projects to devalue or revalue project assets

The model

The first step is to set up an NFT to manage the governance of the Spotization.

Spotization is based on 3 pillars of the Blockchain project :

- A DAO governs with investors, stakeholders and partners
- A Reserve fixes the negative impact and finances impact projects.
- A Launchpad selects and incubates impact projects

Launchpad

Impact
DAO
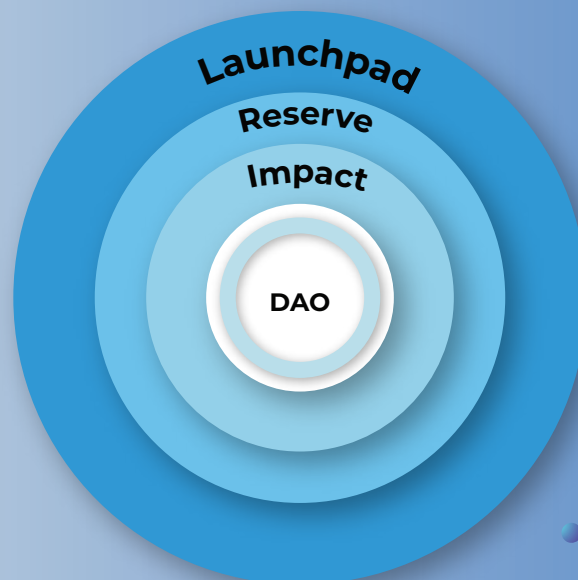

3 entities to accelerate Spotization :

Spotiz Institut

Our consultants analyze, train and coach on the community economy and

Spotiz Countries

We are present in Switzerland, Africa, India and France to meet specific local requirements.

Spotiz Technologies

Our platform sets up the technological infrastructure for the implementation of Spotization, either in its own name or by selecting the right partner.

The plan

Our plan to make Spotization a business model!

We have requests for goods or services in Spotization. With DAO, we will do our best to meet them with the same criteria: impactful projects, unifying communities, unlocking assets, calculating impact for users, and member governance.

We start with mobility. Real estate, agriculture and heritage are subjects we are studying. Other sources of innovation are also being studied.

The DAO will decide on the projects and the management of its funds.

Number of spotization prokects planned in the next 5 years :

| | Mobility | Real Estate | Heritage | Community | Agriculture |
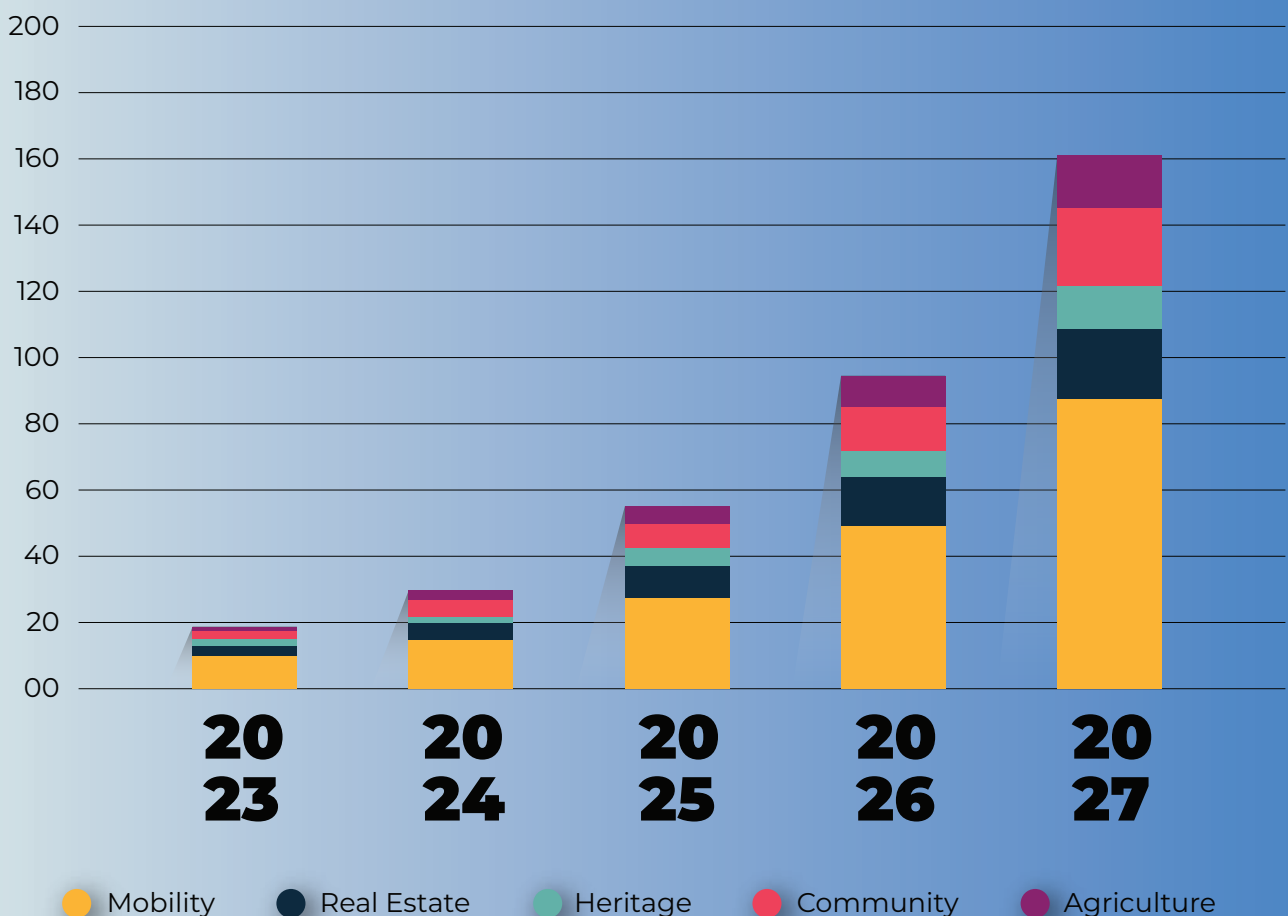

Use Cases Examples

Parking spot

Cities are removing spaces; users cannot find parking spots! But some are unoccupied or for sale.

Problems :

- Lack of spots in city centers
- Public transport or bicycle are not appropriated for all
- Prices are expensive

Spotization Benefits :

- Owned and used by community.
- Create spots in stressed areas
- Rental profits sharing

Rehabilitation

The Creole huts are a forgotten heritage and fallen by history. Too many new constructions compare to rehabilitation.

Problems :

- Heritage is forgotten
- Not enough housing
- The artisanal work is lost

Spotization Benefits :

- Owned by community
- Rehabilitation into luxury house
- Develop ultra-local tourism

Agricultural sector

The agricultural sector is undergoing changes. Not enough convergence between all actors of the chain.

Problems :

- The ecological/social efforts are not rewarded
- Set up a cooperative is complex
- The consumer is not part of chain value

Spotization Benefits :

- Final product value is redistributed fairly
- Organization is quick and easy to do
- The impact calculation values or penalizes each actor
- The consumer is rewarded

Roadmap

What we achieved

2020 ● **People2People** — **Spotiz Team**

2021 ● **Our Market** — **App Development**

H1-2022 ● **App Launching** — **Mobility & Collaboration Sporiz Europe**

H2-2022 ● **Web3 & Blockchain** — **Spotization & Tokenomics**

Next Steps

H1 2023 ● **Impact & Projects** — **Private Sale, NFT & DAO Spotiz Institute & Spotiz Africa**

H2 2023 ● **Reserve & Incubation** — **Public Sale Launchpad & Soulbond Token**

H2 2023 ● **Tokenization & Scalability** — **Blockchain Projects Impact Utility Token**

● ● ●
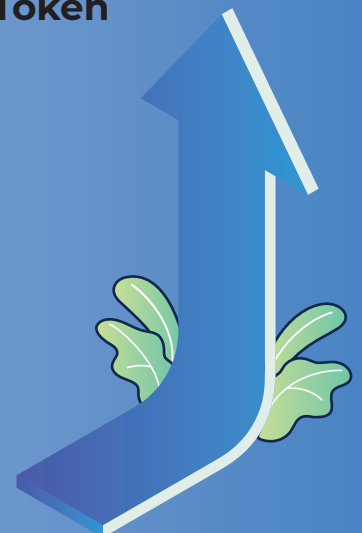

Tokenomics

Invest and take part in impact projects and the cooperative economy!

To federate a community around Spotization, we have decided to set up a Decentralized Autonomous Organization (DAO), which will govern the underlying activities of Spotiz Blockchain. Indeed, the members of this DAO will be able to actively participate in Spotization, a cooperative economy, by investing and/or participating in the development of impact assets.

A New Model for Community Enhancement

These investments will be made after a favorable decision by vote of the DAO, with the common treasury. This common treasury will be created by the initial participation of each member. These participations are materialized by an NFT. Each member can hold several NFTs depending on the amount of investment desired. Our private sale starts from January 15th 2023 until January 20th 2023.

	NFT Number	Unit Price
Private Sale	1'200	250 CHF
Public Sale	5'600	390 CHF
Team	100	-
Partners	50	-
Advisors	50	-

Private Sale	Allocation
Community Treasury DAO	105'000 CHF
Technical Development & Audit	95'000 CHF
Spotiz operating costs	100'000 CHF
