

Spotiz

Spotization

Invest on sharing economy, the spirit of collaboration and ecology

Our Vision

Resources are not inexhaustible; many stranded assets can be made available to the community. This promotes ecology and local solutions.

We value People2People exchanges, facilitating the sharing economy and inducing gains in terms of carbon footprint.

A new model to strengthen the community

We want to create the conditions for the development of the sharing economy, community spirit and collaboration on impact projects.

Understand and implement tomorrow's solutions today!

From Spotiz to Spotization

From People2People Green Mobility App

Spotiz created in 2020 a collaborative P2P mobile application (People2People) on last mile mobility. It provides real-time access to parking spaces and/or vehicle charging.

The positive effects are threefold: Develop local collaboration, the sharing economy and fight against pollution in the city (20 mins is the average time to find a parking space, it releases 1'400g of CO₂).

To cooperative and Impact models

Over the past year, our day-to-day experience with collaborative models, the sharing economy and impact has forged our expertise. Organizations have also asked us to model these principles in other sectors.

We have therefore looked at the innovative models that Blockchain projects bring, completely adapted to our values and our challenges:

- From the collaborative economy to the sharing economy,
- From collaborative spirit to community management,
- And from ecology to impact.

Spotization is about eco-responsible people becoming members of a participative economy, by investing and/or participating in impact projects.

What is Spotization?

We have learned a lot about collaborative models, the sharing economy and impact. We are able to offer our **Spotization models**. Organizations are already asking us to support impact projects in this way.

We want to structure the **sharing economy** and the **community spirit** on projects with an **ecological, social, patrimonial and memorial impact**.

1. Create **governance** around asset management (DAO)
2. Calculate **impact** with specialized indicators (Web3) to value the asset
3. Raise a **Reserve** to unlock assets, incubate projects or repair impact
4. **Incubate** projects to promote the impact of the sector

We are setting up a new business model based on an evergreen fund on the Blockchain.

Why doing Spotization?

Structuring the community spirit

Create or structure links between people with common projects and ambitions

Pooling of projects and resources

Projects are stronger together in terms of collaboration, funding and impact

Measuring impact to evaluate projects

Quantify and value the impact of projects to devalue or revalue project assets

Strengthening and empowering the community

The community will have governance and management rights over the projects

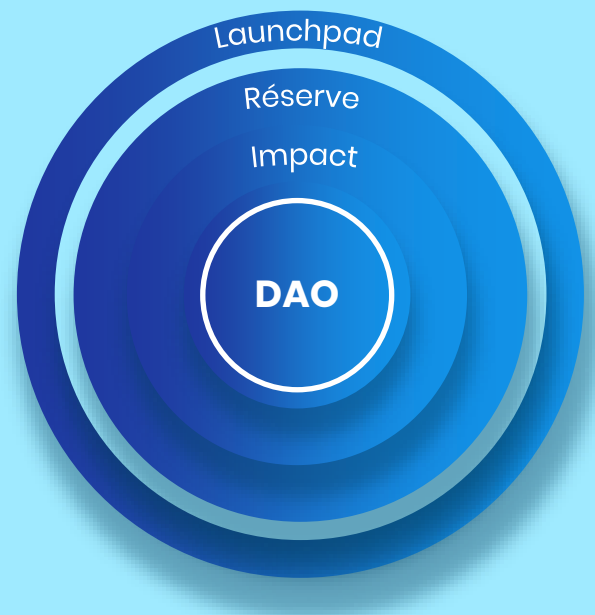

The model

The first step is to set up an NFT to manage the governance of the Spotization.

Spotization is based on 3 pillars of the Blockchain project :

- A **DAO** governs with investors, stakeholders and partners
- A **Reserve** fixes the negative impact and finances impact projects.
- A **Launchpad** selects and incubates impact projects

3 entities to accelerate Spotization :

- **Spotiz Institute** : Our consultants analyze, train and coach on the community economy and the impact in Web3 mode.
- **Spotiz Technologies**: Our platform sets up the technological infrastructure for the implementation of Spotization, either on its behalf or by selecting the right partner.
- **Spotiz Countries** : We are present in Switzerland, Africa, India and France to meet specific local requirements.

Use Case **Green** mobility

Use Case 1: Parking spots

Cities remove parking lots; users have no place to park!

There are private parking lots unoccupied or for sale, the Spotiz community may be interested in owning this property and/or its use.

Issues:

- Lack of parking spaces
- Not everyone takes public transport or a bicycle
- Parking prices are expensive

Benefits of Spotization:

- Create Parking spots in tension areas
- Members got specific prices on Parking sessions
- Buy existing parking spot for Spotiz members
- Sharing of rental profits
- Very interesting return on investment

Use Case 2: Electric chargers

Not enough electric chargers according to demand!

The number of electric vehicles is far bigger than the charging stations available. Private owners could rent charge to community

Issues:

- Lack of chargers
- Time to charge can be very long
- Private power chargers are expensive

Benefits of Spotization:

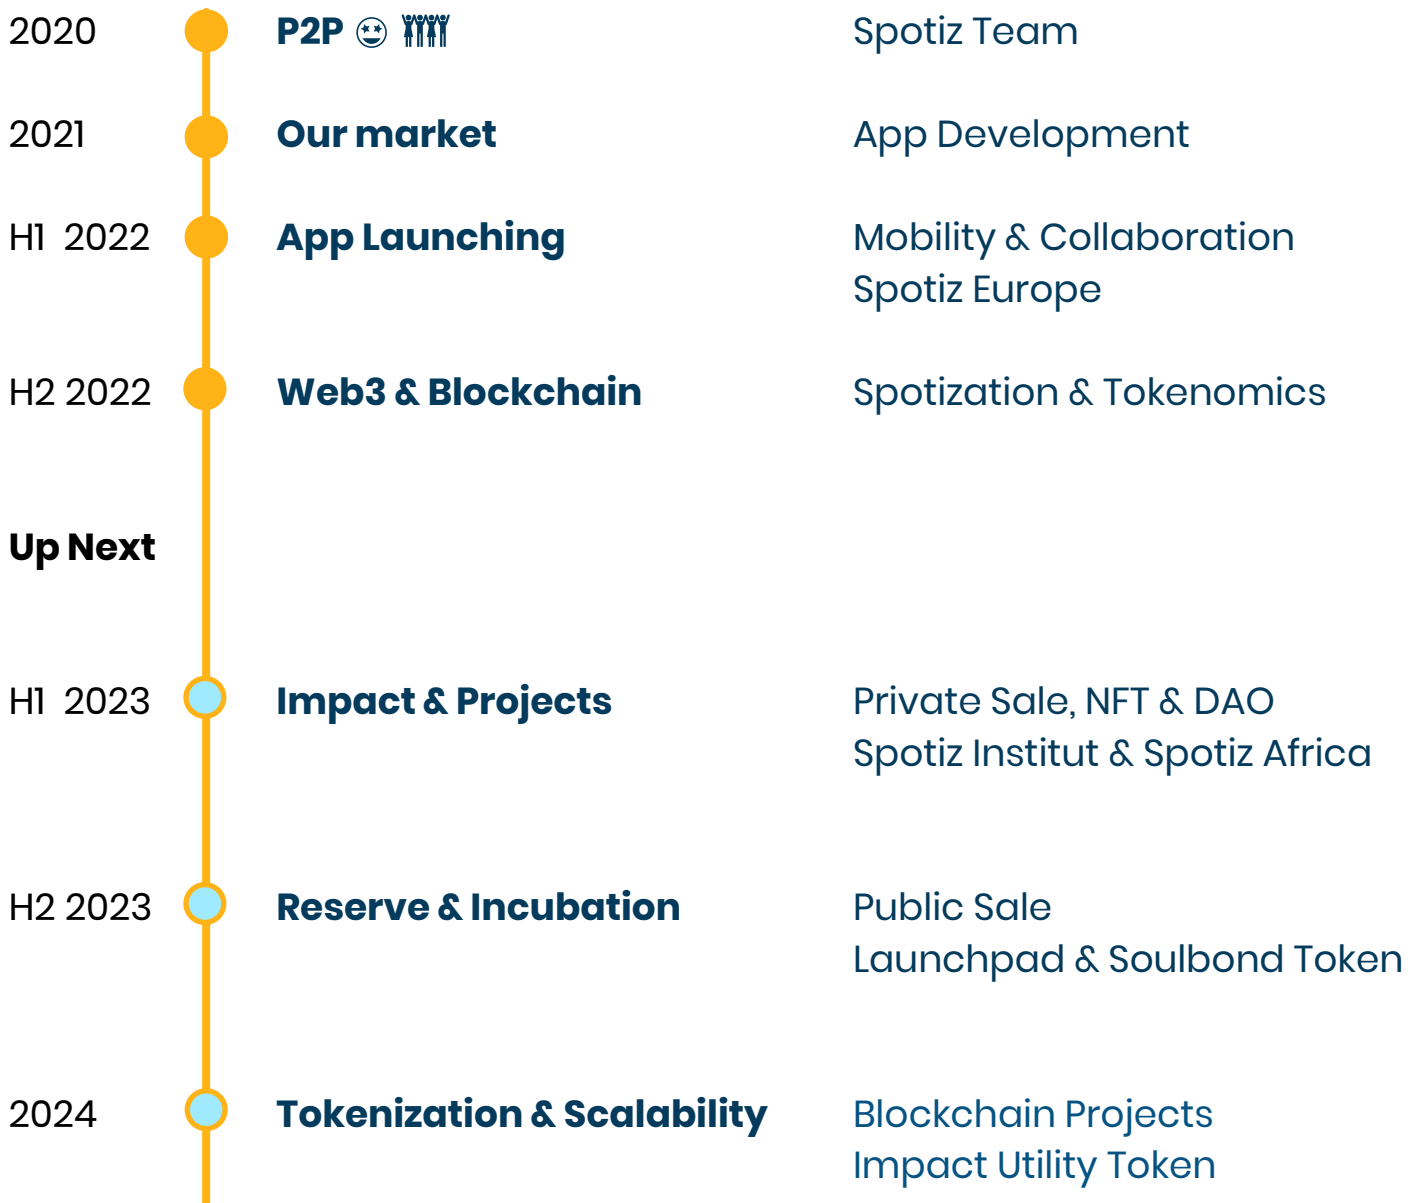

- Create new charging points for members
- Members got specific prices on charge
- Rent existing chargers to community
- Sharing of rental profits
- Very interesting return on investment

Roadmap

What we achieved

Tokenomics

Invest and take part in impact projects and the cooperative economy!

To federate a community around Spotization, we have decided to set up a **Decentralized Autonomous Organization** (DAO), which will govern the underlying activities of Spotiz Blockchain. Indeed, the members of this DAO will be able to actively participate in Spotization, a cooperative economy, by investing and/or participating in the development of impact assets.

A New Model for Community Enhancement

These investments will be made after a favorable decision by vote of the DAO, with the common treasury. This common treasury will be created by the initial participation of each member. These participations are materialized by an NFT. Each member can hold several NFTs depending on the amount of investment desired. Our private sale starts from January 15th 2023 until January 20th 2023.

	NFT Number	Unit Price
Private Sale	1'200	250 CHF
Public Sale	5'600	390 CHF
Team	100	-
Partners	50	-
Advisors	50	-

Private Sale	Allocation
Community Treasury DAO	105'000 CHF
Technical Development & Audit	95'000 CHF
Spotiz operating costs	100'000 CHF
